EXAMINER

FLETCHER, JAMES A

ART UNIT PAPER NUMBER

2616

DATE MAILED: 01/20/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No. 09/972,870	Applicant(s) WEI, CHING-YUAN	
	Examiner James A. Fletcher	Art Unit 2616	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on 06 December 2005.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 18-36 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 18-36 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Specification

1. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed. In particular, the title includes the term "broadcast" which is neither claimed nor illustrated in the disclosure.

Response to Arguments

2. Applicant's arguments with respect to claim 18 have been considered but are moot in view of the new ground(s) of rejection, but will be addressed by the Examiner.
3. Applicant's arguments filed 6 December 2005 have been fully considered but they are not persuasive.

In re page 6, Applicant's Representative states: "Beckert does not disclose 'an optical media reading device' including 'a memory comprising a built-in program for processing video and audio operations' as claimed in amended claim 1."

The Examiner respectfully notes that the claim does not recite the word "media" and that claim 1 is no longer part of this application. The Examiner believes the Applicant's Representative is referring to amended claim 18, and will address his remarks accordingly.

The Examiner respectfully disagrees with the Applicant's Representative's statements. Beckert clearly and distinctly discloses an integrated system that includes each and every element of the application's recited features, as shown in Figures 1 and 3, in addition to the passages cited in the final rejection.

Claim Rejections - 35 USC § 102

Art Unit: 2616

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 18-19, and 21-24 are rejected under 35 U.S.C. 102(b) as being anticipated by Beckert et al (6,202,008).

Regarding claim 18, Beckert et al disclose an apparatus comprising:

- an optical reading device (Col 4, lines 1-3 “the CD ROM drive 38 performs a dual role of storage drive and entertainment player) comprising:
- a signal output port (Col 6, lines 16-18 “The audio signal processor 96 also drives digital to analog converters for a six channel audio output”);
- a memory card slot capable of receiving a memory card (Col 4, lines 4-6 “dual PCMCIA card sockets 44 which accept PCMCIA card types I, II, and III”);
- a digital video and audio decompressing card, coupled to the optical reading device and further coupled to the memory card slot by a data bus (Col 6, lines 12-16 : an audio signal processor 96 to perform the...Dolby pro-logicTM, AC-3 and MPEG decoding” and Fig 4, path 200); and
- a memory comprising a built-in program capable of processing video and audio operations (Col 2, lines 39-40 “a digital signal processor [DSP] which performs the signal processing for audio and video data.” It is understood by those of skill in the art that DSPs make use of programs stored in memory to perform the algorithms described by those programs).

Regarding claim 19, Beckert et al disclose an apparatus, wherein the digital video and audio decompressing card comprises a digital video and audio decompressing chip (Col 6, lines 12-16 “an audio signal processor 96 to perform the...Dolby pro-logic™, AC-3 and MPEG decoding” and lines 18-19 “The audio signal processor 96 is preferably implemented as a DSP [digital signal processor]”) and the memory (Col 6, lines 27-33 “A fast data memory 110 functions as a high speed data communications buffer between the serial peripheral devices. The fast data memory is preferably implemented as a high speed SRAM...which provides high speed buffering...of audio data”).

Regarding claim 21, Beckert et al disclose an apparatus wherein the signal output port is capable of outputting decompressed video and audio signals to a display device (Col 4, lines 50-51 “The computer 22 can output visual data to the LCD 54 at the faceplate, or to the monitor 24” and Col 6, lines 16-18 “The audio signal processor 96 also drives digital to analog converters for a six channel audio output”).

Regarding claim 22, Beckert et al disclose an apparatus wherein the optical reading device comprises a DVD device (Col 4, lines 11-12 “A DVD [digital video disk] player may also be included in the computer 22”).

Regarding claim 23, Beckert et al disclose an apparatus for broadcasting digital video and audio signal, wherein the memory card comprises a compact flash card (Col 6, line 67 – Col 7, line 3 “These applications can also be stored on the hard disk drive 132 or on a removable storage medium, such as a CD ROM, cassette, PC-Card Flash memory, PC-Card hard disk drive, or floppy diskette”).

Art Unit: 2616

Regarding claim 24, Beckert et al disclose an apparatus for broadcasting digital video and audio signal, wherein the memory card slot comprises an adapter for adapting another memory card into the memory card slot (Col 7, lines 9-13 "The computer module 64 has a PC-Card interface 135 which includes a PC card socket used to support types I, II, or III PC cards [e.g., extra memory, hard disk drives, modems, RF transceivers, network adapters, or other PC-Card peripherals]").

Claim Rejections - 35 USC § 103

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

7. Claims 27-30 and 32-36 are rejected under 35 U.S.C. 103(a) as being unpatentable over Beckert et al.

Regarding claims 27 and 32, although Beckert et al do not specifically disclose the individual elements recited in the claims, they do disclose the use of a computer with optical reading device running a "Windows" operating system (Col 6, line 59 – Col 7, line 9), which is known to those of ordinary skill in the art of being able to perform the recited limitations.

The examiner takes official notice that determining a compressed image file format, reading, decompressing, and outputting the image file are notoriously well known, widely used, and commercially available steps for handling compressed digital image files.

Art Unit: 2616

Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to modify Beckert et al to include the steps mentioned.

Regarding claims 28 and 33, Beckert et al disclose a method and an apparatus wherein decompressing the compressed digital image includes executing a program on a video decompressing chip (Fig 4, item 94 "VGA Controller"), wherein the program is built-in to a memory coupled to the decompressing chip (Fig. 4 shows the VGA controller connected to the data bus 32, which is connected to Fig. 3 item 132 "Disk").

Regarding claims 29 and 34, Beckert et al do not specifically disclose a method and an apparatus wherein determining a file format include identifying a JPEG image format file, they do disclose the use of a computer with optical reading device running a "Windows" operating system (Col 6, line 59 – Col 7, line 9), which is known to those of ordinary skill in the art of being able to identify a JPEG image.

The examiner takes official notice that identifying a JPEG image is a notoriously well known, widely used, and commercially available step for handling compressed digital image files.

Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to modify Beckert et al to include identifying a JPEG image.

Regarding claims 30 and 35, Beckert et al disclose a method and an apparatus wherein reading the compressed digital image includes reading files from a PCMCIA format memory card (Col 2, lines 21-25 and Col 3, line 63 – Col 4, line 12), but do not specifically disclose those files as being compressed digital image files.

Art Unit: 2616

The examiner takes official notice that compressed digital image files are notoriously well known, widely used, and commercially available means of storing, copying, and viewing of images taken by users, and allow a common, low cost means of doing so.

Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to modify Beckert et al in order to include reading of compressed digital image files from a PCMCIA card.

8. Claims 20 and 26 are rejected under 35 U.S.C. 103(a) as being unpatentable over Beckert et al as applied to claims above, and further in view of Kagle et al (6,601,056).

Regarding claim 20, Beckert et al suggest a versatile player (Col 6, lines 65-67 "The computer module 64 supports any variety of applications that the vehicle user might desire") but do not specifically disclose a player for MPEG layer 2 and layer 3 decoding.

Kagle et al teach an apparatus for broadcasting digital video and audio signal, wherein the digital video and audio decompressing chip support decompressing processes of MPEG layer 2 and layer 3 for decompressing video and audio signal which is stored in the memory card (Col 3, lines 53-58 "removable digital media output data in the format in which it is stored. The data formats may include JPEG [Joint Photographic Experts Group], GIF [Graphics Interchange Format], TIFF [Tagged Image File Format], BMP [Bit Mapped Graphics Format], MP3, WAV audio, Real audio, etc.").

Art Unit: 2616

As suggested by Beckert et al, and taught by Kagle et al, MPEG layer 2 and layer 3 decoders are well known, commercially available, and widely used decoders, providing the user with compact data storage and acceptable quality in reproduction.

Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to modify Beckert et al in order to include MPEG layer 2 and layer 3 decoding.

Regarding claim 26, Beckert et al suggest a versatile player (Col 6, lines 65-67 “The computer module 64 supports any variety of applications that the vehicle user might desire”) but do not specifically disclose being able to identify GIF format data.

Kagle et al teach an apparatus for broadcasting digital video and audio signal, wherein the video and audio broadcasting program is able to identify GIF format stored on the memory card (Col 3, lines 53-58 “removable digital media output data in the format in which it is stored. The data formats may include JPEG [Joint Photographic Experts Group], GIF [Graphics Interchange Format], TIFF [Tagged Image File Format], BMP [Bit Mapped Graphics Format], MP3, WAV audio, Real audio, etc.”).

As suggested by Beckert et al and taught by Kagle et al, the ability to identify and reproduce GIF format data images is a well known, commercially available, and widely used technology allowing the user to take advantage of the compression, motion, and quality features of the Graphics Interchange Format.

Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to modify Beckert et al to include the ability to identify and reproduce GIF format file data.

Art Unit: 2616

9. Claim 25 is rejected under 35 U.S.C. 103(a) as being unpatentable over Beckert et al as applied to claims above, and further in view of Jones et al (6,438,638).

Regarding claim 25, Beckert et al disclose the use of a variety of storage media, but do not specifically disclose the use of a secure digital card.

Jones et al teach an apparatus for broadcasting digital video and audio signals, wherein one of the memory card formats is a secure digital card (Col 2, lines 59-60 "CF-to-PCMCIA adapter 10 is a passive adapter that contains an opening that receives CompactFlash card 16").

As taught by Jones et al, secure digital cards are well known, commercially available, and widely used means of storing data in a medium that prevents disclosure to unauthorized persons and inadvertent erasure, while still providing a compact, portable medium.

Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to modify Beckert et al in order to provide a means of connection to a secure digital card.

10. Claims 31 and 36 are rejected under 35 U.S.C. 103(a) as being unpatentable over Beckert et al as applied to claims above, and further in view of Jones.

Regarding claims 31 and 36, Beckert et al disclose a method and apparatus wherein files are read from a memory card as analyzed and discussed above, but do not specifically disclose reading a compressed digital image from a memory card inserted into an adapter that is inserted into a memory card slot in the optical media reading device.

Jones et al teach an apparatus for reading compressed digital image files through an adapter inserted into a PCMCIA socket (Col 1, lines 55-64).

As taught by Jones, adapters for memory cards are well known, widely used, and commercially available means for allowing a user to read data from a card that is not directly compatible with his reader, providing him with a low cost and simple means of reading data that would otherwise be unavailable to him.

Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to modify Beckert in order to include an adapter to the PCMCIA card reader.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to James A. Fletcher whose telephone number is (571) 272-7377. The examiner can normally be reached on 7:45-5:45 M-Th, first Fridays off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, James Groody can be reached on (571) 272-7950. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
